258- Add Digits

Algo Input : 38 Output : 2

Process to solve

Sum of digits = 3+8=11

Sum of digits = 1+1=2

Output = 2

digit processing while number >=10

Code

```
Class Solution {
    public int addDigits(int num) {
        while(num >= 10) {          → if false, it is already a single digit.
            int sum = 0;
            while (num > 0) {
                int digit = num % 10;      ← extract the last digit
                sum += digit;              ← add that digit to sum
                num = num / 10;            ← remove the last digit
            }
            num = sum;
        }
        return num;
    }
}
```
