Day 14, 03/11/26

121. - Best Time to Buy and Sell Stock

The main idea is to find the lowest buying price before the current day and calculate the profit if we sell today

Logic

1. Keep track of the minimum price seen so far.
2. Calculate the profit if we sell at today's price : currentPrice - minPrice.
3. Update the maximum profit.
4. Continue until the array ends.

Code

```
Class Solution {
    public int maxProfit(int[] prices) {
        int minPrice = prices[0];
        int maxProfit = 0;

        for (int i=1; i< prices.length; i++) {
            minPrice = Math.min(minPrice, prices[i]);
            int profit = prices[i] - minPrice;
            maxProfit = Math.max(maxProfit, profit);
        }

        return maxProfit;
    }
}
```

Time Complexity : O(n)
Space Complexity : O(1)

```java
class Solution {
    public int maxProfit(int[] prices) {

        int minPrice = prices[0];
        int maxProfit = 0;

        for(int i=0;i<prices.length;i++){

            minPrice = Math.min(minPrice, prices[i]);

            int profit = prices[i]-minPrice;

            maxProfit = Math.max(maxProfit, profit);
        }
        return maxProfit;
```
