1281- Subtract the Product and Sum of Digits of an Integer

Ex:- Input n = 234 , Output = 15

product of digits = 2*3*4 = 24

Sum of digits = 2+3+4 = 9

Output (Ans) = Product of digits - Sum of digits

= 24 - 9

Output = 15

~~Algorithm~~

1. Initialize sum = 0 & product = 1
2. Extract the last digit using n%10
3. Add the digit to sum
4. Multiply the digit into product
5. Remove the last digit using n/10
6. Repeat until n becomes 0.
7. Return product - sum.

Time Complexity

O(log n)

Space Complexity

O(1)

Code

```
class Solution {
    public int subtractProductAndSum(int n) {
        int sum = 0;
        int product = 1;
        while (n > 0) {
            int d = n % 10;
            sum += d;
            product *= d;
            n = n / 10;
        }
        return product - sum;
    }
}
```
