Day 22, 11/11/26

203. Remove Linked List Elements

Approach : Dummy Node + Traversal

The cleanest solution is to use a dummy node before the actual head. This avoids special handling when the head itself needs to be removed.

Code

```
class Solution {
    public ListNode removeElements(ListNode head, int val)
    {
        ListNode dummy = new ListNode(0);
        dummy.next = head;
        ListNode current = dummy;
        while (current.next != null){
            if(current.next.val == val){
                current.next = current.next.next;
            }else{
                current= current.next;
            }
        }
        return dummy.next;
    }
}
```

Time Complexity : O(n)
Space Complexity : O(1)
